## Post #1 – General Syphilis

### 📌 Syphilis Cases Are Rising in Our Community

Syphilis is a serious STI that can lead to long-term health problems if left untreated — but the good news is, it's preventable, treatable, and curable.

⚠ Many people don't know they have it because symptoms can be mild or go unnoticed.

💡 That's why regular testing is so important, especially if you're sexually active with new or multiple partners.

Contact your doctor for testing. Don't have a doctor? Free and confidential testing and treatment are available at The Chautauqua Center.

<https://www.tcchealth.org/>

Call for an appointment:

Dunkirk (716) 366-5060

Jamestown (716) 484-4334

👉 Protect yourself and others — get tested and treated today.

## Post #2 – Congenital Syphilis

### 👶 Protect Your Baby from Syphilis

Syphilis is a serious sexually transmitted infection (STI) that can harm you — and during pregnancy, it can seriously harm your baby.

The good news? You can protect yourself and your baby by getting tested during pregnancy.

What is syphilis?

It's an STI caused by bacteria and spreads through skin-to-skin contact with a syphilis sore — usually during sex. A pregnant person can pass it to their baby during pregnancy or childbirth.

✓ Know the facts. Get tested. Protect yourself and your baby.

Contact your doctor for testing. Don't have a doctor? Free and confidential syphilis testing and treatment are available at The Chautauqua Center. <https://www.tcchealth.org/> Call for an appointment: Dunkirk (716) 366-5060 Jamestown (716) 484-4334
